III. CLAIM AMENDMENTS

- 1. (Currently Amended) A method for presenting information contained in user messages in a user interface of in which method the user message multimedia terminal, comprises at least one component, and which user message is transmitted to the multimedia terminal in a multimedia message transmission system, wherein in the method, presentation model is formed to contain information related to at least one component connected with the user message, said presentation model is supplemented with a reference to the location of data related to presenting at least one component in said user message, said last recited user message being the same user message as said first recited user message, and said presentation model is added to said same user message.
- 2. (Previously Presented) The method according to claim 1, wherein said presentation model is set up in the terminal which transmits the message.
- 3. (Previously Presented) The method according to claim 1, wherein said multimedia message transmission system comprises a multimedia message service center, in which messages addressed to the multimedia terminal are received to be transmitted further to the multimedia terminal, and the presentation model is set up in the multimedia message service center.
- 4. (Previously Presented) The method according to claim 1, wherein said presentation model is formed by using the SMIL format.

- 5. (Previously Presented) The method according to claim 1, wherein said data related to presenting the component comprises said component.
- 6. (Previously Presented) The method according to claim 1, wherein said data related to presenting the component comprises the search address of said component.
- 7. (Previously Presented) The method according to claim 1, wherein the user interface of the terminal for presenting the message comprises at least a display, at least one component comprises visual information, and said presentation model is also supplemented with information about placing the component on said display.
- 8. (Previously Presented) The method according to claim 1, wherein the user interface of the terminal for presenting the message comprises at least audio means, at least one component comprises audio information, and said presentation model is also supplemented with data about converting the component into audio information in the audio means.
- 9. (Currently Amended) The method according to claim 1, wherein said presentation model is also supplemented with information about the time of effect of the component, such as a display time of an image or a text, or a time of repeating a sound.
- 10. (Previously Presented) The method according to claim 9, wherein the message comprises at least two components, and

said presentation model is also supplemented with information about the mutual synchronization of the components.

- 11. (Previously Presented) The method according to 1, wherein the message comprises at least two pages, and said presentation model is supplemented with data about the order of presenting the pages.
- Amended) Α system for transmitting 12. (Currently multimedia user messages, comprising means for transmitting a user message to a multimedia terminal which comprises a user interface for presenting information contained in the user messages, and each user message contains at least one component, wherein the system comprises means for forming a presentation model in the user message, the presentation model comprising information related to presenting at least one component in said user message, said presentation model is supplemented with a reference to the location of data related to presenting at least one component in said user message, said last recited user message being the same user message as said first recited user message, and the system comprises means for attaching said presentation model in said same user message.
- 13. (Previously Presented) The system for transmitting multimedia messages according to claim 12, wherein the terminal which transmits the message comprises means to set up the presentation model.
- 14. (Previously Presented) The system for transmitting multimedia messages according to claim 12, further

comprising a multimedia message service center which comprises means for receiving messages addressed to the multimedia terminal, means for transmitting the messages further to the multimedia terminal, and means for setting up a presentation model.

- 15. (Previously Presented) The system for transmitting multimedia messages according to claim 12, wherein said presentation model is formed by using the SMIL format.
- 16. (Previously Presented) The system for transmitting multimedia messages according to claim 12, in which the user interface of the terminal presenting the message display, wherein at least least a comprises at visual information, and said comprises component presentation model is also supplemented with data about placing the component on said display.
- The system for transmitting 17. (Previously Presented) multimedia messages according to claim 12, in which the interface of the terminal presenting the message comprises at least audio means, wherein at least information, and said audio comprises presentation model is also supplemented with data about converting the component into audio information in audio means.
- 18. (Currently Amended) The system for transmitting multimedia messages according to claim 12, wherein said presentation model is also supplemented with information about the time of effect of the component, such as the time of displaying an image or a text, or the time of repeating

a sound.

- 19. (Currently Amended) The system for transmitting multimedia messages according to claim 12, wherein the message comprises at least two components multimedia pages, and said presentation model is also supplemented with information about the mutual synchronization order of the components presenting the multimedia pages.
- 20. (Previously Presented) The system for transmitting multimedia messages according to claim 12, wherein the message comprises at least two multimedia pages, and said presentation model is supplemented with information about the order of presenting the multimedia pages.
- 21. (Currently Amended) A transmitting multimedia terminal which comprises means for forming user messages of at least component, for transmitting the one and means messages, wherein the multimedia terminal also comprises means for forming a presentation model in the user message, which presentation model comprises information related to least one component added presenting at in the message, and which presentation model is supplemented with a reference to the location of information related to presenting at least one component in said user message_ said last recited user message being the same user message as said first recited user message, and means for attaching said presentation model in said same user message.
- 22. (Currently Amended) A receiving multimedia terminal which comprises means for receiving user messages, and a user interface for presenting information contained in the

user messages, and each user message contains at least one component, wherein the multimedia terminal also comprises means for interpreting a presentation model attached formed in a user message, which presentation model comprises information related to presenting at least one component, which presentation model is supplemented with a reference to the location of information related to presenting at least one component in said user message, said last recited user message being the same user message as said first recited user message, and the multimedia terminal comprises means for finding out said presentation model from said same user message.

- 23. (Previously Presented) The multimedia terminal according to claim 21, wherein it is a mobile terminal.
- 24. (New) The method according to claim 9, wherein said information about the time of effect if the component comprises a display time of an image or a text, or a time of repeating sound.
- 25. (New) The system for transmitting multimedia messages according to claim 18, wherein said information about the time of effect of the component comprises a time of displaying an image or a text, or the time of repeating a sound.
